

IBM Power Systems — a single, energy-efficient, easy-to-deploy platform for AIX, Linux, and IBM i applications

IBM POWER Systems from Jeskell unite IBM's highly successful integrated platform (System i®) with its industry-leading AIX® operating system platform (System p®) and ultra high frequency, dual core POWER6® processors. The result is a potent server platform for all of your AIX, Linux®, and IBM i applications — more than 15,000 are available across all three operating systems.

With IBM POWER Systems, Jeskell helps you align your IT with major industry trends: virtualization, consolidation, support for high availability, and support for green IT through efficient use of IT resources.

- Consolidate a diverse set of AIX, IBM i, and Linux applications on a single server
- Use fewer processors for the same workload — POWER6 processors are 2X faster than the previous generation POWER5® processors
- Increase asset utilization — potentially as much as 30% or even higher — with industrial strength IBM PowerVM™ virtualization
- Dynamically adjust server capacity for changing workload demands
- Move running partitions between servers to avoid planned downtime
- Meter, control, and cap energy use with IBM Active Energy Manager
- Implement superior, role-based security with built-in intrusion detection

A clear path to investment protection and growth

For over several decades, POWER processor technology has continually evolved to set new standards. This ensures a durable, long-term architecture that can continue to grow with you while protecting existing infrastructure investments. Jeskell provides full support for upgrades and migration.

From mid-market to enterprise

IBM POWER servers from Jeskell range from versatile blades and pre-configured entry/mid-range systems to those able to run large, highly parallel, computationally-intensive workloads and algorithms. A complete suite of POWER Systems software helps you extend current investments and achieve higher application availability.

Jeskell: POWER experience you can count on

Jeskell is one of the few IBM business partners fully certified on every IBM platform and all IBM storage, software, and services. That means we can deliver dramatic infrastructure improvements by leveraging POWER6 performance and industry-leading virtualization with optimized systems and networks across all systems resources.

- One-stop source for fully integrated POWER Systems solutions
- Nearly two decades of hands-on experience with POWER processor-based systems
- Top-tier IBM POWER Systems business partner — highly competitive pricing
- Nationwide network of highly skilled, IBM certified sales and technical specialists
- End-to-end solutions, from initial planning through deployment, validation, knowledge transfer, training, and ongoing support
- Established relationships with key third party technology and solution vendors
- \$1.5M Solution Center for Power Systems evaluation, POC's, application testing, and training
- Wide range of favorable financing options for lease or purchase

Services you can trust

As a top-tier IBM Premier Business Partner, Jeskell has ready access to the vast array of IBM technical and support services and the ability to match them to your specific needs. We also offer a full complement of technical and professional services to help you plan, architect, and implement your POWER Systems solution.

Track record of success

Established in 1991, Jeskell has experienced continuous growth by helping commercial enterprises, government agencies, and educational institutions nationwide successfully deploy the right technology solution for their specific IT infrastructure and business needs. Headquartered in Silicon Valley, Jeskell has offices across the US and is regularly in the top five percent of all IBM business partners.

At Jeskell, we measure our success by yours. Contact us today, at
